

DEARLY FEBRIANO

IRWANSYAH

SOFTWARE ENGINEER

PROFILE

I am a recent high school graduate with a keen interest in technology. I frequently conduct in-depth research into global technological advancements. As the times evolve, I work on trending projects and learn new things, allowing me to broaden and enhance my skill set.

PROJECT

1. OpenForge (AI Agent)

AI Development

2026

- OpenForge Agent is a local AI agent system designed to help users complete various tasks, search for information offline, build software, automate workflows, manage systems, and enhance device security. With an offline-first approach, Nexa prioritizes privacy, performance, and full control over user data.

2. Arus Ledger (Money Tracker)

Web Development

2026

- Arus Ledger is a local-first personal money tracker PWA built on the principle that financial data should never leave your device. Every transaction, account, category, budget, and setting lives in IndexedDB via Dexie — there is no server, no API, no cloud sync, and no analytics.

3. Instant Resume (CV Builder)

Web Development

2023

- Instant Resume is a CV builder platform built as a freelance software engineering engagement in 2023.
